# Introduction

The HesabPay Developer Portal offers a comprehensive and seamless integration solution for e-commerce and online service providers. By utilizing the portal, businesses can independently integrate the HesabPay API to start accepting online payments while accessing detailed documentation, resources, and tools to streamline the integration process.

The Developer Portal also supports advanced features like the **"Pay as Guest"** option, enabling users without a HesabPay account to make payments through alternative methods, including AfPay Card, Mastercard, Visa, American Express, Discover, JCB Express, or UnionPay. This feature provides flexibility and ensures a user-friendly payment experience for all customers.
Additionally, the **"Distributing Payments to Multiple Vendors "** empowers merchants to manage multi-vendor marketplaces efficiently. It enables the distribution of payment amounts to multiple vendors after a successful transaction.

We encourage all e-commerce and online service providers to take advantage of this opportunity and explore the possibilities offered by the HesabPay Developer Portal. This platform is now available for use by anyone with an approved business account.

Here's a step-by-step guide for using the HesabPay Developer Portal:

# Sign up and business account registration process:

Anyone with an approved business account can use the developer portal.

- Download the HesabPay App.
- After entering your phone number and OTP, you'll be redirected to the profile page.
- Enter Profile Information and your Business Information.
- In the profile section, find the option "**Do you have a business license?**".
- Select "**Yes**" and enter all the details of your business. Then, click on the submit button.
- After submitting your business information, our team will review and verify the details provided.
- Once your business account is approved successfully, you can use and login to the Developer portal.
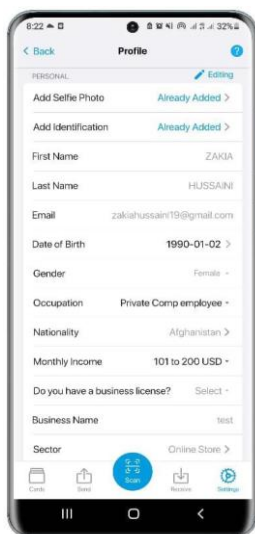

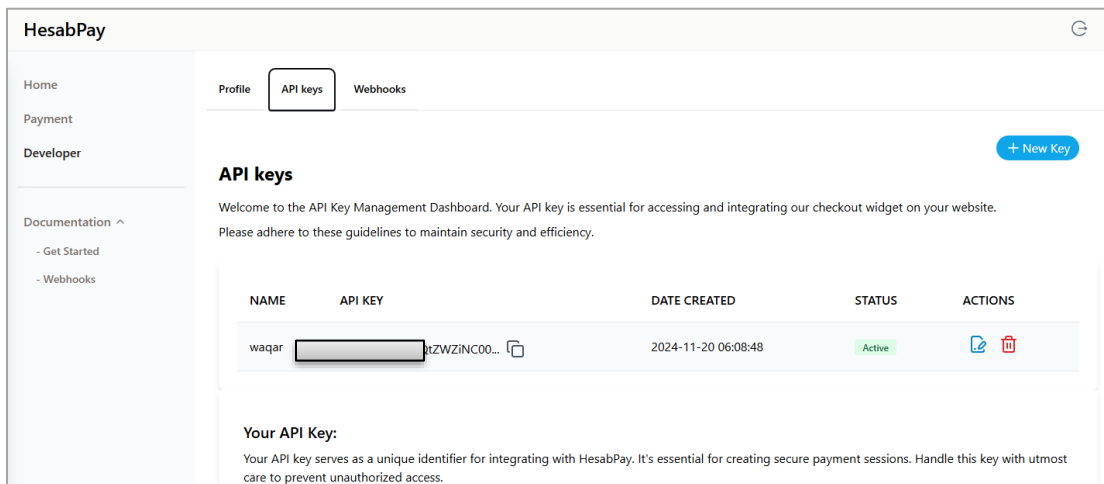

## Access the Developer Portal:

- After your business account is approved, go to your web browser and visit the following URL: https://developers.hesab.com/login.
- Use the same credentials you used to create your HesabPay business account to log in to the Developer Portal.

- After logging in, you will be redirected to the Developer Portal home page
- On the home page, navigate to the "**Developer**" section. Then, click on the "**generate key**" button. This API key is essential for integrating HesabPay with your website or application.

## Integrate with HesabPay:

- Once you have obtained the API key, utilize it to integrate HesabPay's payment functionality into your platform.
- Incorporate the necessary code into your website or application to enable users to make payments through HesabPay.
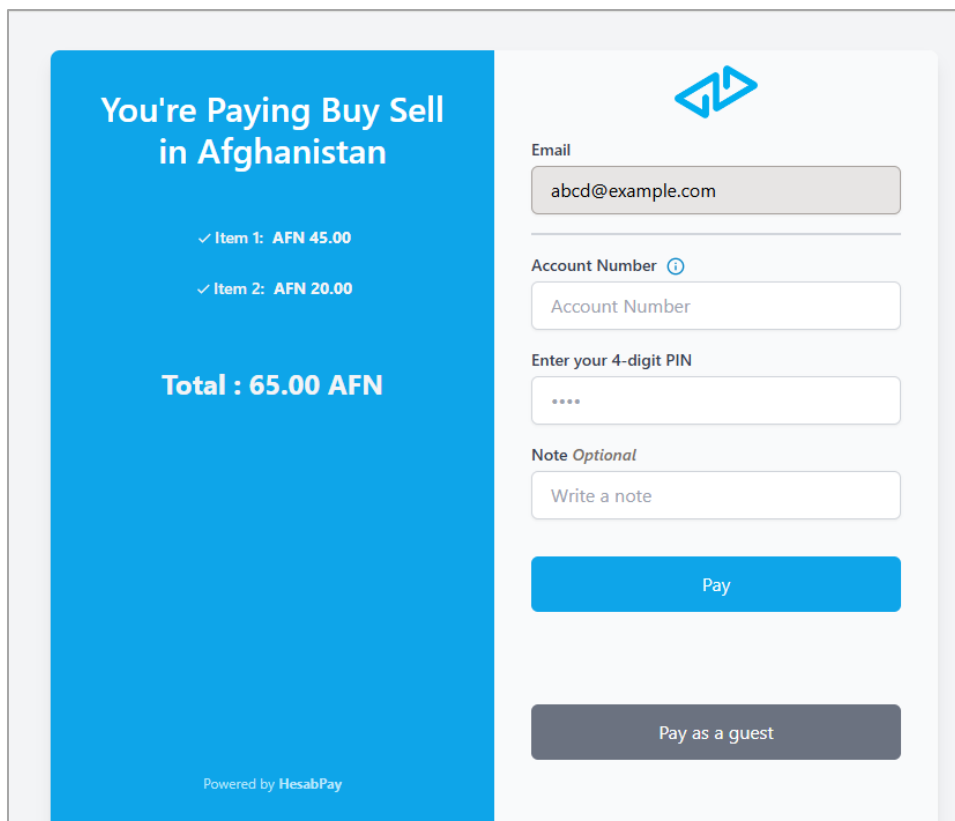

## Send Transaction Details via API:

- When a user initiates a transaction on your platform, ensure that you automatically send a list of items and their corresponding prices to HesabPay via the API.
- For example, if a user adds items to their cart on your e-commerce platform, automatically send the names of the items and their individual prices to HesabPay.

## Redirect to the payment page:

- Redirect the paying user to the HesabPay payment page, where they can view the transaction details, including the purchased items and the total amount to be paid. The payment page will offer the following options: pay using HesabPay, Pay as Guest and Distributing Payments to Multiple Vendors

- ### HesabPay account

  The paying user will log in to their HesabPay account and verify their PIN.
  Once authenticated, the transaction will be automatically processed and paid.

- Pay as Guest

The "Pay as Guest" feature enables users without a HesabPay account to make payments using other payment methods. Users can select from options such as AfPay Card, Mastercard, Visa, American Express, Discover, JCD Express, or UnionPay
If the user selects "Pay as Guest," they will be presented with various payment options to complete their transaction.
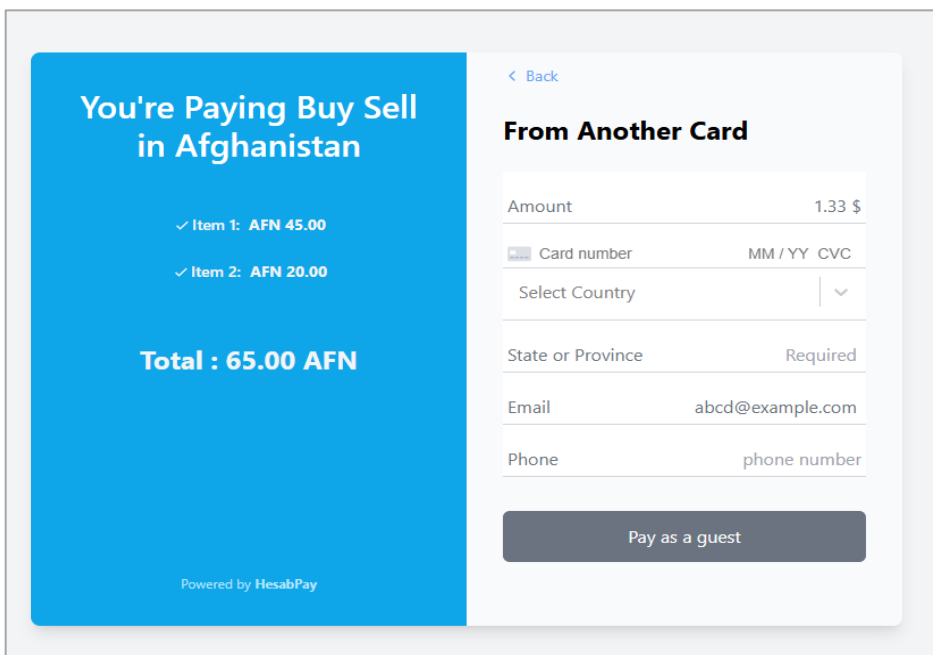

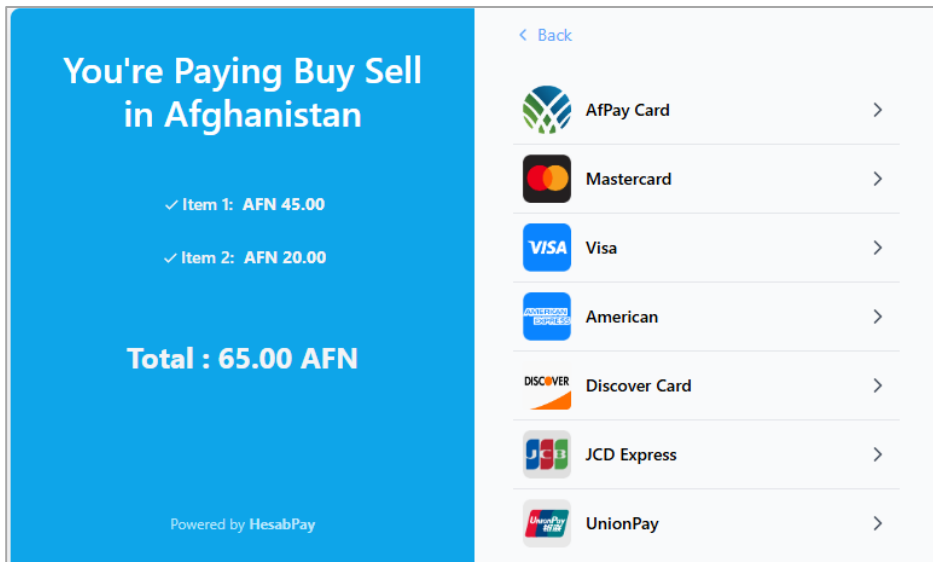

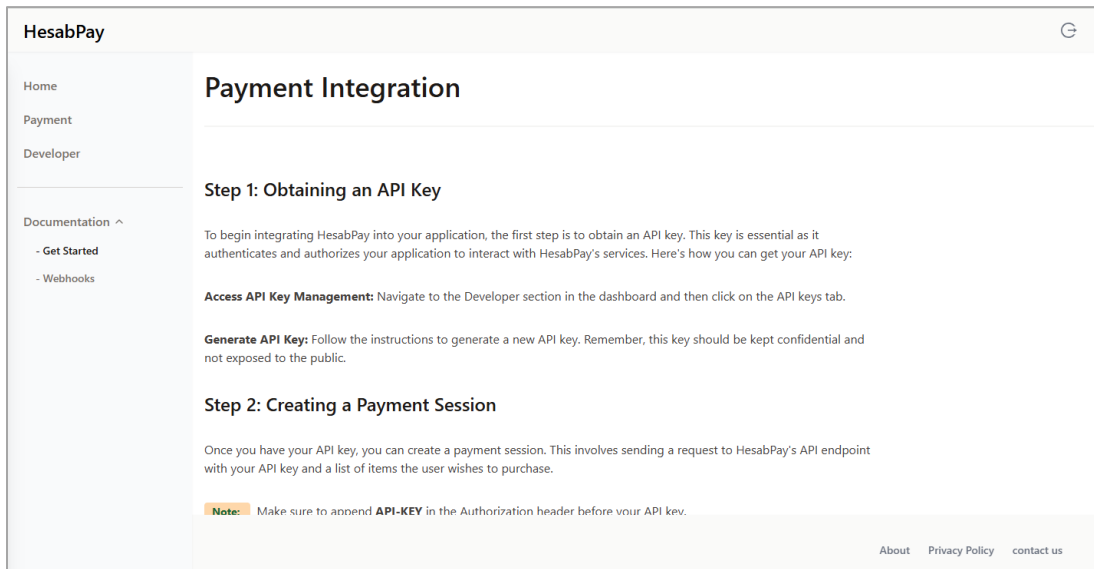

- ## Distributing Payments to Multiple Vendors

The Vendor Payment Distribution API enables merchants who integrate our payment gateway into their e-commerce websites to distribute payment amounts to multiple vendors. This functionality is essential for multi-vendor marketplaces where items purchased by customers belong to different vendors. Using this API, merchants can seamlessly transfer the respective amounts to each vendor's account after a successful payment session

# Explore Documentation:

For detailed instructions on using the API key, including code snippets and examples, please refer to the Documentation section. It offers comprehensive guidance on integrating HesabPay into your platform. If you require further assistance, our technical support team is available to help.
